My game crashes after exit (everytime)  
(win7 64-bit). I use this PC for gaming only and I only play a few games - it is super clean.

Also had ingame crashes with loosing my progression.  
Hoped the classic pack release would be more stable.

Which fix would you recommend to play more stable.  
Which one to get a higher resolution only.  
Is 1.13 compatible with this version and can we change the language as we have the voice and language from the old original version?

I sought out a thread like this to find out how they were and what version of JA2 it was (standard? Gold?)

This is the first time I'll have ever played a Jagged Alliance game, so kind of excited to get into them. First I need to boot into windows so I can extract the game files so I can use them on the Mac.

I have a question about this classic bundle, are these games fully mod compatible or is there a difference to the original games? I hope these work also on Vista, not only W7.

Would love if these would be compatible so I wouldn't have to search for my game boxes in the cellar.

Have played through JA1 and JADG. Currently enjoying vanilla JA2 although I do get this weird crash on exit in Win 7 x64 like mentioned earlier. But otherwise no issues and happily reliving past glories and keeping myself off the streets and out of trouble until JA:FB.

Anyone else find themselves becoming heavily reliant on Skyrider?
