Installed JA2 to Win10. First it didn't work but read a solution, that if i rename the intro file, it may help. It did. So I start playing and I play and save games. and finally I quit. So later I try to load savegame. It processes it to about 2/3 and then tells me that there was an ERROR opening savegame.

The game version is 1.12.

Hi Satakas, welcome to the pit!  
As you aren't using 1.13, but only vanilla, the exe you are using is ancient, and we couldn't debug it even if we wanted to (why are you using such an ancient exe and posting in a 1.13 sub-thread?).

I'd try to check whether 1.13's win 10 fixes work, but no idea if that can be applied.

Also make sure to follow all the usual precautions like not installing in any path that includes folder names like Programs, Program Files, Programs (x86) etc.

Well, i didn't notice that its 113 thread. Sorry for that. Anyways, I downloades the 113 version from here now: <http://ja2v113.pbworks.com/w/page/4218334/Downloads> but this wont even start. Just tells me that "Fatal Error" Could not initialize library [some .slf files]. I also downloaded the latest update from the same page but the result is the same.

I have changed the compatibility to XP and i run it in 16 bit mode but doesnt seem to help.
