How do I make my merc walk? Double clicking makes him run and single clicking makes him walk fast, almost like a jog. But I can't get him to just walk. See RedAtMath's youtube video for reference, around the 1:30 marker.

Hello millennium1555, Welcome to the Pit :xmas

The slowest actual walk is sneak-walk (Z to toggle sneak mode). What you see in the video are performance issues, likely due to not installing the win8 dll's.

Thank you so much for the reply. For some reason it was driving me crazy thinking there was something I had missed.

This game is amazing and the 1.13 mod brings it to a whole different level of immersion for me. My only hang up is I feel like there's a huge learning curve, like I've spent more time researching how to do something than actually doing it lol. But at the same time when it all comes together it's a beautiful thing to behold. Thanks again!
